

LC-100 Drawdown Coater

The ChemInstruments Laboratory Drawdown Coater produces samples of room temperature emulsion and solvent coatings so that a thorough evaluation can be made of these adhesives.

Lab production of a large quantity of consistent samples for comprehensive evaluation is simplified by several construction features of the LC-100:

Made of high quality materials, the LC-100 is built to last. The rugged steel frame and unwind stand ensure long life.

- Two dial indicators permit quick, accurate, reproducible gap settings ranging from 0.0001" to 0.0500".
- Two precision ground stainless steel coating bars produce even cross web coat weight.
- Coater reservoir capacity up to 125 grams.
- 12" (30cm) wide samples of unlimited length can be produced.
- Standard features include unwind stand, steel base plate, and nylon side dams for coating width control.

Dimensions (approx.)

Height: 18" (46cm)
 Width: 19" (48cm)
 Depth: 22" (56cm)
 Weight: 55 lbs. (25 Kg)

Options

- Bull Nose Top Bar
- Meyer Rods
- Custom widths available
